

THE SAFEST HORSE FENCE
ON THE MARKET - IS ALSO THE
MOST SUSTAINABLE!

EQUI  SAFE[®]

WWW.EQUISAFEINTER.COM | +46 430 53070

EquiSafe® have been manufacturing horse fences since 1986

The idea to start manufacturing the market's safest fence for horses was born after one of the founding family's horses had been seriously injured on a wooden fence. The task was then to produce the market's safest and most attractive horset fence so that they could not injure themselves while maintaining the highest quality.

After this was done, the foundation had been laid for EquiSafe which today, after more than 35 years, is a world-leading fencing company in equestrian sports.

Our first fence was for many years called the A-fence and is the basis for the different types of fences we offer today.

Fences from EquiSafe are made in such a way that if your horse should unexpectedly throw itself through the fence or fall into it, the slats & posts will fold without breaking off and thus avoid injuring the horse. The fence also does not contain any dangerous dyes, sharp corners or edges that the horses can injure themselves on.

All our fences are simple and easy to assemble and made of 100% environmentally friendly recycled and maintenance-free material.

To facilitate the handling of stressed horses, the fence has an integrated electrical wire in the slats, in this way even the nervous horses remain in the paddock and should the horse against all odds throw itself through the fence anyway, there are no loose electrical wires that it can get caught in or take damage from.

Our unique RS-fence, which today has become the market leader, has in turn generated more types of products and areas of use, such as hospital paddocks, riding arenas, paddocks, canter fences, dressage fences, trotting fences, stallion fencing, jumping obstacles, etc. Now we have also further developed our unique fences so that they has become even safer and more durable. This newly developed fence is now called RS fence and is our most popular products. In addition, all our fences "MADE IN SWEDEN" are of the absolute highest quality!

Due to the popularity of the fence, there are now dealers in several countries around the world where we are the obvious choice for those riding facilities and farms that want a nice, safe and durable fence with the highest quality to be able to feel safe in all situations.

The production takes place in our own factory in Sweden from 100% recycled environmentally friendly material. To prevent the material from degrading, it is homogeneously colored together with UV stabilizers to withstand sunlight, weather and wind in the most extreme conditions.

Do as several of the largest stables and secure your pastures and work surfaces with our uniquely secure RS-fence.

The New RS-Fence

- even safer, more secure and more sustainable

The RS-fence from EquiSafe, which is a further development of the A-fence, is made in such a way that if your horse should get scared and throw itself through the fence or fall into it, the slings & posts will bend without breaking off and avoid so way to harm the horse. The fence does not contain any dangerous dyes, sharp corners or edges that the horses can injure themselves on.

All EquiSafe fences are simple and easy to install and made of 100% environmentally friendly recycled and maintenance-free material.

To facilitate the handling of stressed horses, EquiSafe RS-2, RS-3, RS-3H and RS-4 have an integrated electrical wire in the rails, in this way even the nervous horses remain in the paddock and should the horse, against all odds, throw itself through the fence, there are no loose electrical wires that it can get caught in or injure itself on.

Our unique RS-fence is our most popular product and is sold worldwide as the safest fence on the market. In addition, all our fences "MADE IN SWEDEN" are of the absolute highest quality!

White, brown or black?

White The classic choice that both looks good and looks good for the horses.

Brown For you who want the fence to be more discreet and closer to nature.

Black For you who want a more modern and stylish facility.

Double gate

Single gate

Double gate

EquiSafe gates

Single-, double- or special gates

Horse walker

EquiSafe angled distance fence

EquiSafe straight distance fence

EquiSafe RS-special

EquiSafe can always build different types of fence based on the customer's wishes.

We can, for example, build house fences, a 5 m high fence or one with seven slats. We have no restrictions.

Contact us with your ideas.

EquiSafe RS-DL

Dressage fence loosed

A 0.40 - 0.45 m low fence in sections of 4 m that are easy to set up during competition to screen the riding arena, or leave in front all year round. Available in two variants; with 1 or 2 slans.

Section dressage fence

EquiSafe RS-DF

Dressage fence fixed

A 0.40 - 0.45 m low fence for a permanent/ fixed dressage riding arena.

Available in white, brown or black color.

EquiSafe RS-G

The galloping fence

A fence with a rail 1.3 m above ground. This is available in two versions straight - where the rail rests on top of the post and angled where the rail is attached in a clamp at an angle out from the post so that the horse can run next to it without the legs going against the post.

Installation of
fences – ready to
use!

*We can help you install our fences
with our montage team.*

EquiSafe RS-R

Riding arena

Our fences are also very well suited to riding arenas that are both stylish, safe and feel professional. We have a standard size of 20x60 m which also includes a double gate of 3.6 m. This package includes 4 corner posts and a 160m fence with 2 rails. The distance between the posts is about 1.67 m and of course this fence also has cast electric wires to keep even the naughtiest horses focused on the riding arena.

Round pen

EquiSafe RS-I

Fence for Islandic horses

A fence with a rail 0.40 or 0.80 m above the ground. The fence has 1 sling that rests on the post. Perfect for Icelandic horses and tölt. Can also be built in other heights.

Available in white, brown or black color.

EquiSafe gates and corner post

Plastic corner post
Diam Ø140 mm Length 1.5 m
including cover

Wood post for corner and gates
Diam Ø120
Length 2.1 m

Wood post for corner and gates
Diam Ø50
Length 1.8 m

Earthing rod
Length 1 m

Electric rope post
 Diam Ø65 mm
 Length 1.4, or 1.8 m
 including cover

EquiSafe RS-E65

Electric rope poles 65 mm

For larger pastures, you can use our electric rope poles that are pre-drilled for 4 electric ropes. It is also possible to use with tape insulators for a tape fence. Do not forget to splice with a safety splice as ropes and tapes often have a high braking limit and can damage the horse if it gets stuck.

Available in white, brown or black color.

EquiSafe RS-E90

New stronger electric rope post 90 mm

The 90 mm post comes 1.8 m long together with 3 built-in insulators and a lid for the post. You lower this into the ground 60 - 70 cm into the ground depending on the desired height. It is also possible to use with tape insulators for a tape fence and is available in white, black and brown.

EquiSafe E-line

Electric rope post
 Diam Ø90 mm
 Length 1.8 m including cover

Benefits of the EquiSafe RS Horse Fence

Secure fence

The fence is made in such a way that if your horse should get scared and throw itself through the fence or fall into it, the slings & posts will bend without breaking off and can thus not risk damaging the horse. The fence also does not contain any dangerous dyes, sharp corners or edges for the horses to injure themselves.

Easy care

In order for your fence to last as long as possible, you sometimes need to check that there is current in the fence and take action if e.g. some horse kicked out a sling.

Elegant look

The fence raises the value of the horse property both financially and in terms of appearance.

Water and soap

Use water and soap when cleaning. A well-maintained horse fence can fulfill its function and be a beautiful ornament on the horse property for a lifetime.

Environmentally friendly

The fence is extra environmentally friendly as EquiSafe only uses recycled plastics.

Cost effective

The fence is cost-effective through the simple and flexible installation in combination with the low maintenance.
